Intent-Based AI Financial Copilot
Autonomous DeFi Execution on Weil

Idea submission for

Weilliptic Hackathon - Xpecto'26

Team: Forking All

THE PROBLEM

COMPLEXITY BARRIER

DeFi interactions require deep technical knowledge. Users struggle with bridging, slippage, and complex UI flows.

RISK MISMANAGEMENT

High volatility and lack of automated safety triggers lead to significant capital loss for novice traders.

BLACK BOX AN

Existing automated transparency. Users decisions or trust th large sums.

THE SOLUTION

AI THAT UNDERSTANDS INTENT

Our Copilot bridges the gap between natural language and complex on-chain execution.

- NLP-driven financial workflows
- Autonomous agent decision engine
- Human-in-the-loop verification

HOW IT WORKS

1. USER INTENT

Chat interface receives input like "Optimize my idle USDT safely."

2. AI REASONING

Agent analyzes yield, risks, and gas to build a multi-step plan.

3. VERIFICATION

User reviews the plan. A single click authorizes execution.

4. ON

Action e
and imm

CORE FEATURES

NATURAL LANGUAGE UX

No more buttons and sliders. Tell the AI what you want to achieve financially.

AUTONOMOUS AGENTS

LangGraph-powered agents that can pivot based on real-time market data.

RISK CONTROL

Human-in-the-loop mechanism ensures no transaction happens without explicit safety checks.

ON-CHAIN AUDITING

Every decision path is logged on Weilchain, transparent audit trail.

ARCHITECTURE OVERVIEW

FRONTEND & ENGINE

- React-based Chat UI
- Python Backend API
- LLM (GPT-4) Reasoning Engine
- LangGraph State Management

INTEGRATION & CHAIN

- DeFi Aggregator APIs (Swaps)
- Lending Protocol SDKs
- Weilchain SDK Integration
- Smart Contract Execution Layer

THE TECH STACK

Layer	Technology Used
AI / Reasoning	LLM APIs (OpenAI), LangChain, LangGraph
Backend	Python (FastAPI), Pydantic for validation
Blockchain	Weilchain SDK, Solidity (Audit Logs)
DeFi Connectivity	1inch API, Aave SDK, Alchemy Nodes
Frontend	React.js, Tailwind CSS, Framer Motion

USE CASE DEMO

"Safe Invest"

User Input Prompt

AUTOMATED DECISION FLOW

- **AI identifies:** Low risk appetite, stableco
- **Strategy:** Allocate 50% to Aave, 50% to
- **Execution:** User approves 1 transaction internal calls.
- **Verification:** Transaction hash & logic s Weilchain.

INNOVATION & IMPACT

DEMOCRATIZING DEFI

By removing the technical complexity of blockchain inter
unlock decentralized finance for the next billion users.

Zero Learning Curve

Web2 Experience

THE FUTURE ROADMAP

- **Cross-Chain Expansion:** Moving beyond Weilchain to enable liquidity management across Ethereum, L2s, and
- **DAO-Governed Strategies:** Allowing top analysts to publish "Intent Templates" that users can follow via the A
- **Mobile Integration:** Launching a mobile-first app with biometrics for human-in-the-loop confirmations.
- **Autonomous Rebalancing:** Advanced algorithms for 24/7 yield harvesting without manual intervention.
